About us

“Since more than 30 years, the team at Locker System has been gaining experience in the field of drying products.From various drying methods to the continuous expansion of our product range, we are constantly evolving. Always with our completed projects and customer feedback in mind. We do this for you. For your employees. For your customers. Every project, no matter how big or small, is individually accompanied by us.

With dedication and heart.

Trust & respect

We rely on a trustworthy and respectful collaboration. Through openness and transparency, we create the foundation for long-lasting business relationships and work in partnership to find the best drying solution for you.

Quality

Our focus is on the highest standards of hygienic drying. Our own drying cabinets are based on innovative heat pump technology to ensure an optimal solution that, among other things, supports the longevity of clothing.

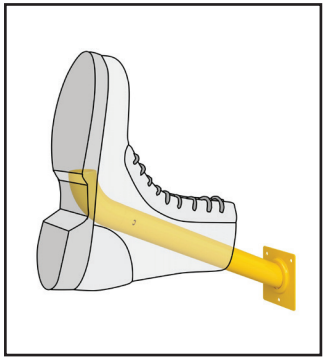

Reliability

We always ensure reliable and consistently high performance of our drying systems. Thanks to robust technology and comprehensive support, we minimize downtime and ensure a continuously smooth operation for you.

Partnership

We see ourselves as a trustworthy partner and accompany you from the first contact to successful implementation and beyond. Close cooperation and individual consultation are our focus.

Products

Optional, various nozzles, e.g., for drying boots, can be installed.

Our portfolio includes wall-mounted dryers, drying cabinets, and locker systems.

The structure and functions of our products are optimally coordinated to ensure excellent drying. Many of our dryers operate with efficient heat pump technology and feature digital control options with programmable timers. This allows them to dry efficiently and energy-saving at the times you desire. Thanks to our short drying intervals and innovative technology, you save even more time and costs. It is also worth highlighting the option to activate smart functions: Our drying cabinets and locker systems are network and bus capable, allowing you and us to monitor and remotely maintain them as well as, with a view to the future, offer numerous further possibilities for optimizing our products. Moreover, hygiene is a high priority for our drying cabinets. Therefore, our locker systems feature an integrated hygiene function – completely without chemicals.

We exclusively use environmentally friendly methods for germ reduction. You decide whether we use ozone in your drying cabinets or not. Ozone is a gas that occurs almost everywhere and is very reactive. In the ozone layer, it protects us from harmful UV radiation. However, ozone can also effectively combat germs, viruses, and fungi in the right dosage by destroying their cell walls and preventing an immune reaction. After the reaction, ozone breaks down into pure oxygen (O2). The alternative, also highly effective method of disinfection, is UV-C. With special UV-C lamps, we can disinfect air and surfaces in our drying cabinets and lockers without aggressive and environmentally harmful chemicals, just like with ozone. Each wardrobe and locker is also equipped with a sophisticated air circulation system that enables first-class drying and transports the humid air away through a modern heat pump system. This means that no additional ventilation systems are required in the changing rooms. Thus, you can be sure that your clothing dries quickly and reliably while maintaining a pleasant indoor climate. Enjoy the comfort and functionality of our cabinets and lockers – for worry-free storage of your clothing.

Europe-wide, our drying cabinets exceed the expectations of our customers and their users. Our lockers, drying cabinets, and wall -mounted dryers set new standards in many areas. They dry hygienically and safely. For us, it is also a matter of course that we always take into account environmental and sustainability aspects.

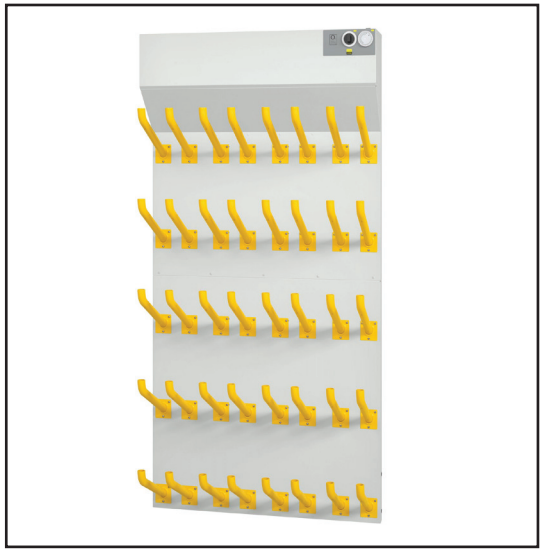

LOCKER SYSTEM

WALL DRYERS

Drying. Fast and professional.

LS Boot 20 Power

Wall dryer for 20 pairs of shoes; two-piece
Including internally ventilated shoe nozzles, yellow
Circulation fan, heating element
Chemical-free germ reduction
6-hour timer + 24-hour programmable timer
Connection cable 1800 mm including Schuko plug
Powder-coated steel, RAL 7035

Connection voltage: 230V / 8.6A / 1.9kW
Dimensions: 199.3 x 101.2 x 37 cm (H x W x D)

Equipment such as shoes/boots and gloves deserve careful and thorough drying after use.

Our proven drying system impresses with its speed and efficiency in our wall-mounted dryers, while also relying on chemical-free methods to reduce germs and odors. This ensures that your equipment not only dries perfectly but also remains hygienically clean – for a good feeling with every use and a longer lifespan of the textiles. The drying times can be individually adjusted: To always reliably know if and when your wall-mounted dryers are running, we have equipped our models with a timer (programmable depending on the model). You decide when the devices turn on and when they stop operating. This makes our wall-mounted dryers particularly efficient and energy-saving.

<- Our LS Boot product line is available for 4 or 5 pairs of shoes as well as in Power versions for 5, 10, 15, or 20 pairs of shoes. Our LS Glove is available for 10 pairs of gloves. All Power models are equipped with the function for chemical-free germ reduction and dry particularly quickly.

Drying cabinets

Drying cabinets for textiles, shoes, boots, gloves, helmets, and masks: For all these important pieces of equipment, we offer you the ideal drying solution.

We select the appropriate nozzles for your individual needs from various options. Our proven drying system stands out for its fast and efficient performance while also relying on chemical-free methods to reduce germs and unpleasant odors.

The daily use of work clothes, helmets, shoes, and gloves often leads to moisture, making daily cleaning impossible. Our drying cabinets offer the ideal solution by quickly and effectively drying clothing with the latest methods. This also applies to sportswear. Our cabinets are versatile and can dry jackets, pants, shoes, caps, gloves, and helmets using various nozzles while reducing germs and odors without chemicals. They do not require extensive connections, as they collect moisture in a container.

Thanks to low energy consumption and short drying times, our drying cabinets are ideal for any application – even for private use.

Quick drying and flexibility are essential in every profession. That’s why we place great importance on equipping each of our drying cabinets with a timer. This allows you to set exactly when the clothing should be dried. Do you want to plan the drying so that your employees have fresh clothes available in the morning? No problem!

You also have the option to activate the drying during working hours so that the devices do not run overnight. Or your customers/ employees decide for themselves when and how long their clothes should be dried. With our drying cabinets, we try to make everything possible and meet all the requirements that are especially important to you.

Do you have special requests? We look forward to them!

LS Happy 650 / 1300

Air circulation drying cabinet
For up to 4 people or equipment
Variable equipment options selectable
Chemical-free germ reduction
6-hour timer + 24-hour programmable timer
Connection cable 1800 mm incl. SchuKo plug
Rotary latch for padlock
Powder-coated steel: body RAL 7038, doors RAL 7035

LS Happy 650:
For up to 4 people or equipment
Connection voltage: 230V / 3.9A / 0.85kW
Dimensions: 211 x 65 x 80 cm (H x B x T)

LS Happy 1300:
For up to 8 people or equipment
Connection voltage: 230V / 7.7A / 1.7kW
Dimensions: 211 x 130 x 80 cm (H x B x T)

LS Eco Happy 650 / 1300 / 1300 Temp

Drying cabinet / heat pump technology
Variable equipment options selectable Chemical-free germ reduction
Eco unit with air filter class F7
Controlled with industrial automation system
– smart and digital: network-capable, bus-capable, and LED display
Condensate drain hose (connection drain on-site)
Connection cable 1800 mm incl. SchuKo plug
Rotary latch for padlock
Powder-coated steel: body RAL 7038, doors RAL 7035

LS Eco Happy 650:
For up to 4 people or equipment
Connection voltage: 230V / 4.5A / 1.0kW
Dimensions: 211 x 65 x 80 cm (H x W x D)

LS Eco Happy 1300:
For up to 8 people or equipment
Connection voltage: 230V / 8.2A / 1.8kW
Dimensions: 211 x 130 x 80 cm (H x W x D)

LS Eco Happy 1300 Temp:
Temperature selectable from 38°C to 80°C; Connection voltage: 230V / 11.8A / 2.6kW

Locker systems

Our smart locker systems are always custom-made and equipped. From planning to assembly, we stand by your side – ensuring that the locker system fits perfectly into your spaces and meets 100% of the needs of your employees and/or customers. With us, no one has to settle for half measures (or wet items).

Wardrobe cabinets and heat pump locker systems are specifically designed for drying clothing and accessories. The individually customizable lockers offer flexible design options and are ideal for locker rooms where they can hygienically dry work clothes or sportswear. With various nozzle options, they allow targeted adaptation to specific applications.

The lockers are made of robust, powder-coated steel and can be equipped with lockable doors upon request. The integrated heat pump process ensures quick and efficient drying while reducing germs and odors without chemicals. A timer allows for the drying times to be adjusted according to needs, thus saving energy. The systems are easy to handle and can be set up flexibly without additional connections, making them suitable for various environments.

LS Eco Locker 300-450

Locker with 2 lockable compartments
including shelves, door-mounted
holders, glove and boot nozzles,
clothes rails, and special clothes
hangers
Circulation fan, heating element
24-hour timer
Powder-coated steel: body RAL 7038,
doors RAL 7035

Dimensions per locker:
224 x 30/35/40/45 x 55 cm (H x W x D)

LS Eco Locker 600-900

Two-door locker
including shelves, door-mounted
holders, glove and boot nozzles,
clothes rails, and special clothes
hangers
Circulation fan, heating element

Powder-coated steel: body RAL 7038,
doors RAL 7035

Dimensions: 224 x 60/70/80/90 x 55 cm
(H x W x D)

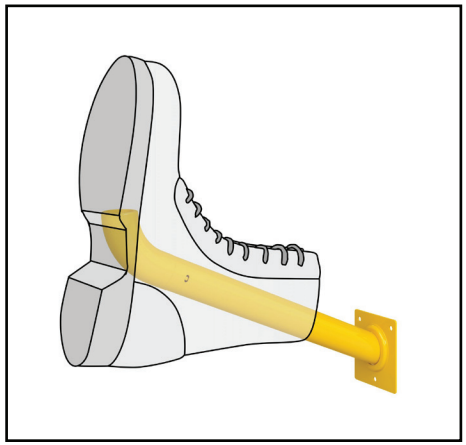

NOZZLES AND

Accessories

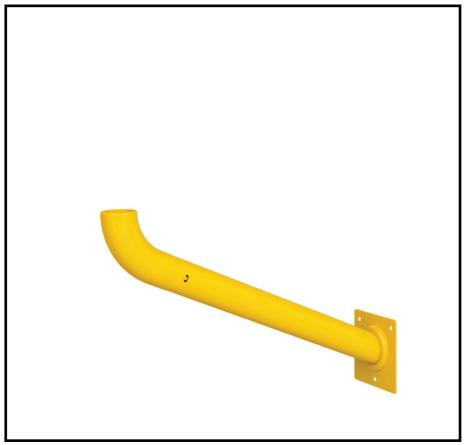

Our innovative internally ventilated nozzles are an integral part of all our drying products and offer versatile application possibilities when needed.

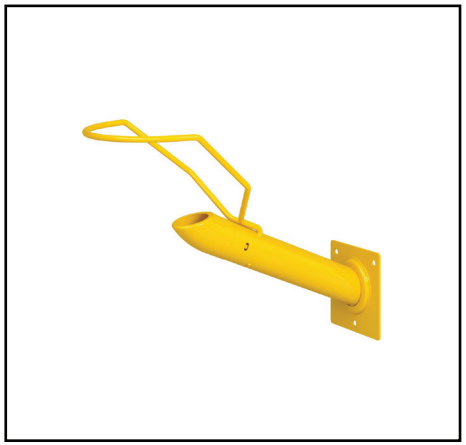

Our wall-mounted dryers are fully equipped with boot or glove nozzles, depending on the desired function. We design drying cabinets and locker systems with our nozzles according to your wishes and the needs of your employees or customers. In doing so, we not only consider practical shelves and robust clothing rods but also integrate cleverly designed holders on the inside of the doors.

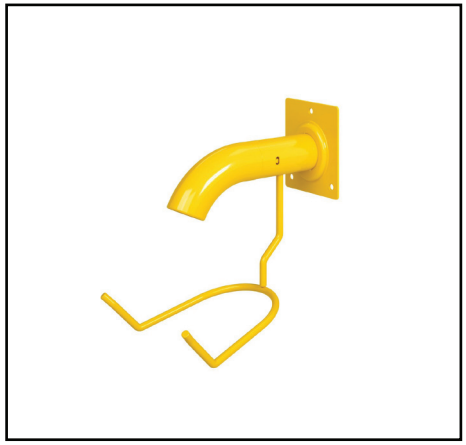

Another highlight is our specially developed ergonomic hangers, which guarantee both functionality and user-friendliness. This ensures that your drying solutions are optimally aligned with the daily requirements and always deliver the best results – for clothing and accessories.

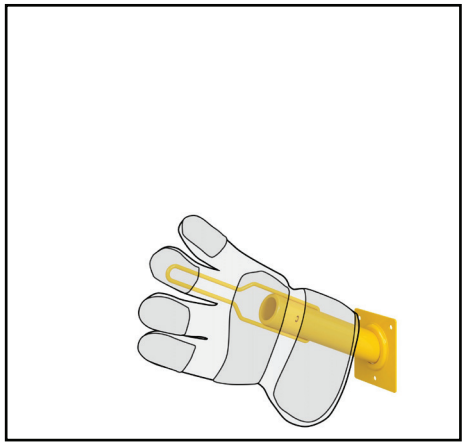

The internally ventilated boot nozzles have the perfect shape to quickly and efficiently dry boots or shoes from the inside.

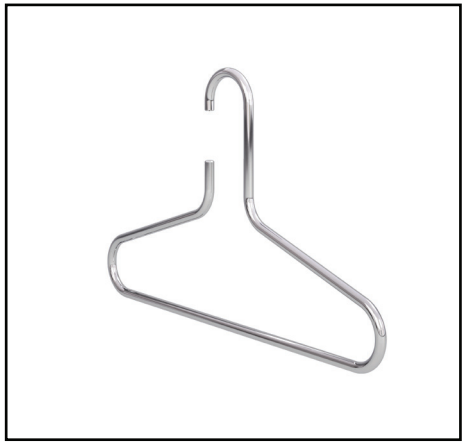

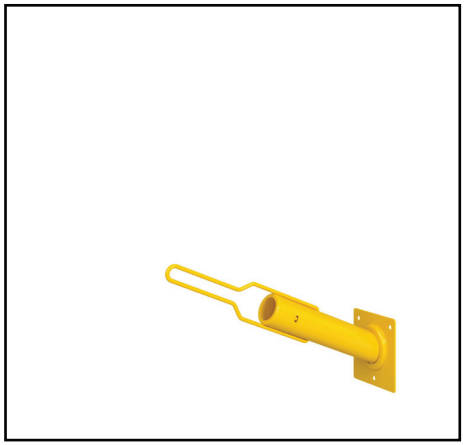

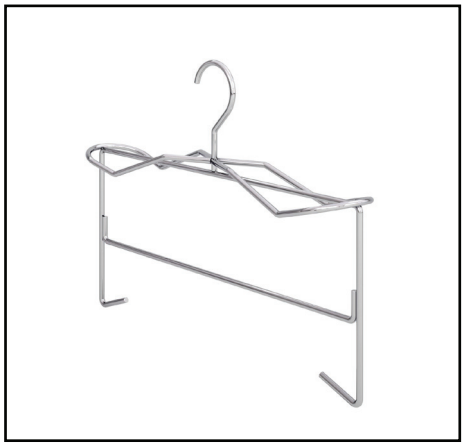

We have also developed perfectly suitable internally ventilated drying nozzles for masks (left) and helmets (above).

The internally ventilated glove nozzles provide ample space for the gloves to distribute the hot air.

For jackets or other outerwear as well as pants, we recommend our special hangers.

Benefits

Professional drying and disinfection of clothing significantly contribute to the well-being and health of your employees and/or customers. When work or sports equipment is always fresh and well-maintained, it not only promotes satisfaction but also enhances performance. In addition to the mentioned smart functions, network, and bus capabilities, our wardrobe cabinets offer ample space to securely and neatly store personal items as well. This creates a pleasant and practical space full of advantages.

Hygiene

We cannot emphasize it enough: Hygiene is the most important factor in our drying cabinets. Only clothing and equipment that is dried quickly is hygienic enough to be worn again without time-consuming cleaning.

Freshness

With still damp, in the worst case musty clothing, freshness is unthinkable. It is so important for motivation and well-being to feel fresh and comfortable in work clothes or sports equipment. This should not be denied to anyone.

Trust

Profitably invest in the well-being of your employees or customers – with our drying cabinets – and gain a high level of trust. Show that you care about the well-being of people and a thoroughly hygienic company.

Service & maintenance

Regular maintenance of your drying systems is essential for smooth operation without disruptions and a long service life.

Our drying cabinets, wall-mounted dryers, and locker systems are complex devices exposed to high stress. To maintain their performance and avoid unexpected failures, we recommend regular maintenance that goes beyond merely replacing wear parts.
As part of our professional maintenance services, we perform annual cleaning of the aggregate systems, thoroughly removing dust and deposits from both the fan and all air channels. This ensures optimal air circulation and prevents overheating. Additionally, we replace filters and lamps, as these components significantly contribute to the efficiency and air quality of the drying units. Regular filter replacement ensures that the air remains clean at all times, while new special lamps reliably reduce unwanted germs.

By regularly maintaining and caring for your drying technology, not only are the life cycles of your devices extended, but operational safety is also significantly increased.
We use high-quality replacement materials and ensure that your machines are always in perfect condition. Rely on our years of experience in maintaining wall-mounted dryers, drying cabinets, and locker systems. Our technicians are well-trained and guarantee that your devices are maintained to the highest standards. With us by your side, you have the assurance at all times that your drying systems will operate reliably and your business will run without interruptions.
